Dr. G Arun Maiya	https://researcher.manipal.edu/en/persons/g-arun-maiya/	Administration	Manipal College of Health Professions, Manipal	DFS is a multifactorial complication of T2DM involving peripheral neuropathy, peripheral arterial disease, and structural deformities that collectively alter foot biomechanics. Despite strong evidence that most diabetes-related lower-limb amputations are preventable, healthcare systems in India largely depend clinic-based assessments that often deprives community level screening and management. In addition, there is a dearth of advocacy, capacity building and training of health care professionals in the public health system of India. Therefore, there is a need of an integrated digital technology-based diabetic foot model using artificial intelligence for amputation prevention strategies, advocacy, capacity building and remote care in people living with T2DM in coastal Karnataka	Health Sciences	ALLIED HEALTH: PHYSIOTHERAPY	FULL TIME CANDIDATES ONLY

Dr. Anoop Kanjirakat Baby	https://www.scopus.com/authid/detail.uri?authorid=22833538700	Aeronautical and Automobile Engineering	Manipal Institute of Technology, Manipal	This research focuses on developing a compact and easy-to-use device for rapid blood testing using biomarker detection. The project combines concepts from biology, physics, and engineering to create a miniaturized lab-on-a-chip system capable of separating plasma directly from a small blood sample without complex equipment. Students with basic knowledge of biology or physical sciences and an interest in healthcare technologies are encouraged to apply. Prior experience in microfluidics or sensors is helpful but not required, as essential skills will be developed during the research. Dr. Ramakrishna Nayak	https://researcher.manipal.edu/en/persons/ramakrishna-nayak	Humanities and Management	Manipal Institute of Technology, Manipal	Keywords: Flexible Sensors; Nanomaterials; Screen Printing; Soil Moisture monitoring; Plant Stress Sensing; Printed Electronics; Precision Agriculture; Sustainable Sensing Systems Domain knowledge required: Basic background in materials science or nanotechnology, including an understanding of nanomaterials such as graphene, metal oxides, or conductive polymers and their role in sensing. Familiarity with sensor fundamentals (resistive/capacitive sensing, calibration) and basic electronics for signal measurement is essential. Knowledge of printed or flexible electronics, especially screen printing and flexible substrates, along with a basic understanding of soil–plant–environment interactions, is highly desirable. Overall, the topic suits students interested in hands-on, interdisciplinary research at the interface of materials, electronics, and agricultural/environmental applications. Dr. Ramakrishna Nayak	https://researcher.manipal.edu/en/persons/ramakrishna-nayak	Humanities and Management	Manipal Institute of Technology, Manipal	Keywords: Bio-inks, sustainable packaging, food-safe inks, smart packaging, anti-counterfeiting, security printing, biopolymers, functional inks, biodegradable materials. Domain knowledge: The required domain knowledge includes polymer chemistry, colloids and surface chemistry, solution behavior, and structure–property relationships. Students will apply their understanding of natural polymers, functional groups, intermolecular interactions, and reaction mechanisms to formulate and stabilize bio-inks. Basic knowledge of analytical techniques such as UV–Visible spectroscopy, FTIR, rheology, and microscopy will support ink characterization. Exposure to applied chemical formulations, material compatibility, and sustainability concepts will provide valuable interdisciplinary training that links chemistry with real-world packaging and security applications. Dr. MURALI GOPAL MURALEEDHARAN	https://www.scopus.com/authid/detail.uri?authorid=57192717596	Aeronautical and Automobile Engineering	Manipal Institute of Technology, Manipal	This topic integrates Computational Materials Science, Machine Learning, and Electrochemistry to develop next-generation interatomic potentials for complex energy storage materials such as MXenes. Key themes include neural network potential development, ion transport, interfacial charge storage, and structure-property relationships under realistic operating conditions. The project is well-suited for students with backgrounds in chemistry, materials science, physics, or chemical engineering who are interested in combining theory, simulation, and energy applications. Dr. Anoop Kanjirakat Baby	https://www.scopus.com/authid/detail.uri?authorid=22833538700	Aeronautical and Automobile Engineering	Manipal Institute of Technology, Manipal	This research focuses on the design and synthesis of nanoparticle-doped polymer membranes for advanced high-temperature proton exchange membrane fuel cells (HT-PEMFCs). It integrates concepts from polymer chemistry, nanomaterials, electrochemistry, and thermal science to address challenges in conductivity, durability, and heat management. Anyone with an interest in functional nanomaterials, membrane engineering, and sustainable energy systems will find this area highly engaging. The work spans materials synthesis, spectroscopic characterization (FTIR, XRD, TGA), transport properties, and modeling, offering a balanced mix of experimental and theoretical research aimed at next-generation clean energy technologies. Dr. MURALI GOPAL MURALEEDHARAN	https://www.scopus.com/authid/detail.uri?authorid=57192717596	Aeronautical and Automobile Engineering	Manipal Institute of Technology, Manipal	This topic sits at the intersection of Machine Learning, Molecular Dynamics, and Thermal Transport, focusing on developing neural network-based interatomic potentials for accurate prediction of interfacial heat transfer. Key themes include deep learning architectures, atomistic modeling, interfacial physics, and multiscale simulation. The project is ideal for students with strong backgrounds in mathematics, physics, mechanical engineering, or materials science, particularly those interested in combining theory with computational modeling. Dr. Anoop Kanjirakat Baby	https://www.scopus.com/authid/detail.uri?authorid=22833538700	Aeronautical and Automobile Engineering	Manipal Institute of Technology, Manipal	This research falls under applied optics, photonics, and biomedical imaging, focusing on optical detection and image analysis of fluorescence signals to identify cardiovascular biomarkers in blood. It involves using lasers and microscopy to capture fluorescence signals and applying image processing techniques to analyze them. The project is well-suited for physics students with a basic understanding of optics and light, and an interest in imaging or signal analysis. Programming or image processing experience is helpful but not required, and essential biology concepts will be learned during the research. Dr. Dolfred Vijay Fernandes	https://researcher.manipal.edu/en/persons/dolfred-vijay-fernandes/	Mechanical and Industrial Engineering	Manipal Institute of Technology, Manipal	The topic “Development and characterisation of hydro-powered triboelectric nanogenerator for remote areas” is a funded project (IMF). It combines fundamental concepts of electrostatics, surface charge transfer, fluid dynamics, and energy conversion. The study provides opportunities to explore the physics of triboelectrification, charge induction, dielectric behaviour of polymers, and solid surfaces at micro and macro scales. It also involves experimental analysis of electrical phenomena such as voltage generation, capacitance variation, charge dissipation, and optimization of energy harvesting efficiency under different hydrodynamic conditions. The interdisciplinary nature of the work allows students to apply core principles of Physics, Electromagnetism, and Fluid Mechanics toward developing practical renewable energy technologies for real-world applications. Dr. Neelima Bayyapu	https://www.scopus.com/authid/detail.uri?authorid=3660182000	Computer Science and Engineering	Manipal Institute of Technology, Manipal	The proposed research lies in the areas of Artificial Intelligence, Multi-Agent Systems, Intelligent Automation, Distributed AI, Smart Systems, Human-AI Collaboration, Cyber-Physical Systems, and Autonomous Decision Systems. The research focuses on developing context-aware intelligent multi-agent frameworks capable of autonomous reasoning, adaptive learning, intelligent orchestration, and collaborative decision making in interdisciplinary smart environments. Important keywords associated with this research include Multi-Agent AI, Autonomous Systems, Context-Aware Intelligence, Intelligent Orchestration, Large Language Models, Reinforcement Learning, Distributed Intelligence, Human-in-the-Loop AI, Explainable AI, Smart Decision Systems, AI Collaboration, Adaptive Learning, Cyber-Physical Systems, and Intelligent Automation. Dr. Jeevan M	https://researcher.manipal.edu/en/persons/jeevan-m/	Biomedical Engineering	Manipal Institute of Technology, Manipal	Research Area: Biomedical Engineering, Neurotrauma, Medical Artificial Intelligence, and Clinical Decision Support Systems. Research Topic: Deep Learning-Based Multimodal Prognostic Framework for Traumatic Brain Injury Using Clinical and Volumetric CT Imaging Data. Keywords: Traumatic Brain Injury (TBI), GCS, GOS/GOSE, Intracranial Hemorrhage, CT Imaging, Volumetric Analysis, Lesion Segmentation, CNN, ResNet, Multimodal Fusion, Explainable AI, Grad-CAM, SHAP, AUC-ROC. Domain Knowledge Requirements: This research requires interdisciplinary expertise spanning clinical medicine, medical imaging, and AI. Clinical knowledge covers TBI pathophysiology, neurological scales, and CT findings. Imaging proficiency includes preprocessing, segmentation, and volumetric quantification. AI expertise encompasses CNN architectures, multimodal fusion, and transfer learning. Data science and Explainable AI competence including Grad-CAM, SHAP, and AUC-ROC evaluation is essential. Core tools include Python.	Technology and Science	ENGG: ELECTRICAL AND ELECTRONICS STREAM	FULL TIME CANDIDATES ONLY
